Bassir — Owner Eyes

What's new this session — visual testing guide

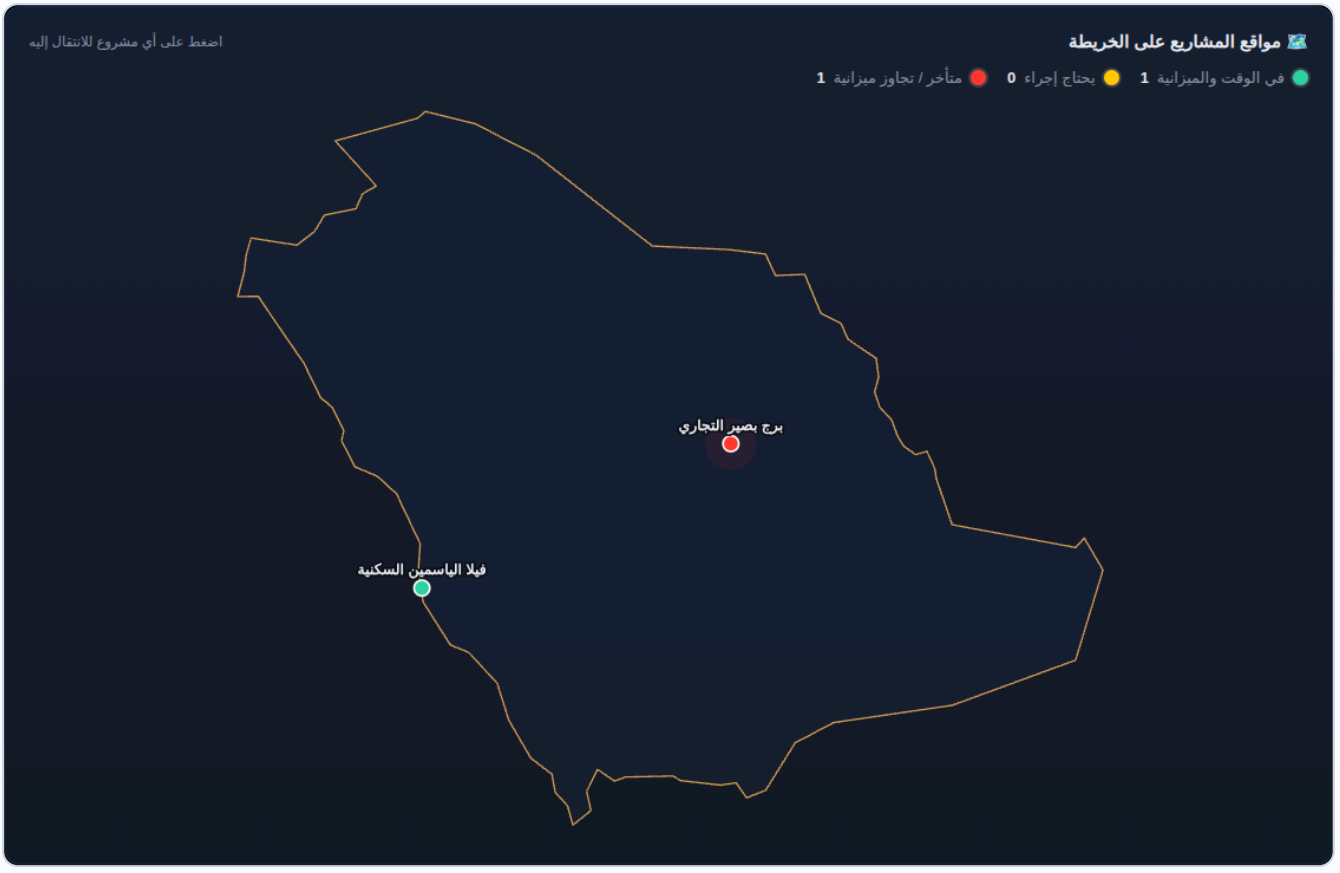

Deployed by Bassir Technology · tested green (0 errors across all roles)

Demo logins (change for production):
Owner `owner / owner123` · Owner-Rep `rep / rep123` · Consultant `consultant / consult123`
Contractor `cont-arch / cont123` · Admin `admin / admin123`

Feature 1 | Test as: Owner

Project locations map (Dashboard & Portfolio)

A real, offline map of Saudi Arabia at the bottom of the Owner dashboard and the Owner-Rep portfolio. One dot per project, traffic-light coloured: **green** = on time & on budget, **yellow** = needs action, **red** = behind schedule or over budget. Click a dot to open that project.

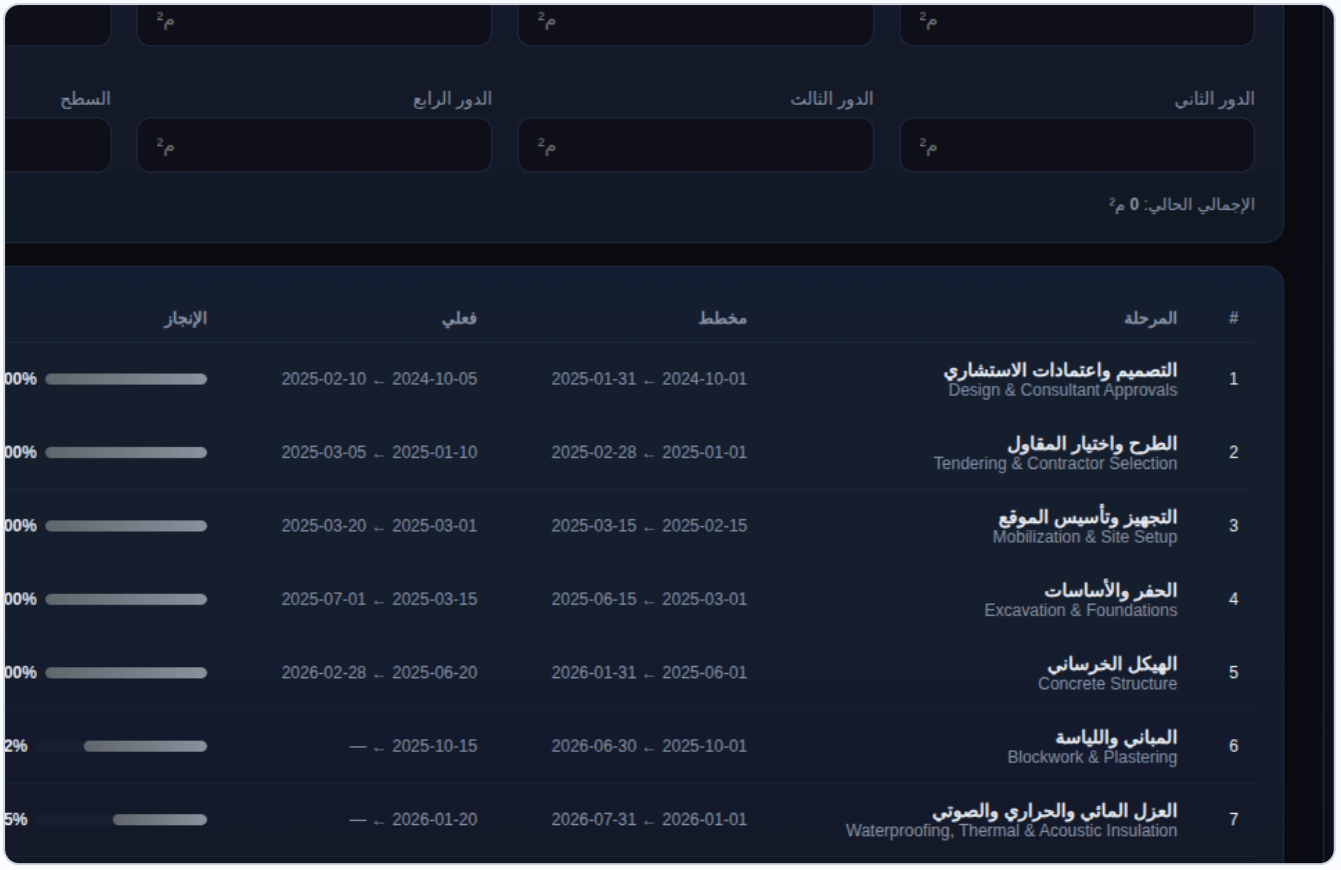

How to test

1. Log in as **owner / owner123**
2. Open 📊 **لوحة القيادة (Dashboard)** and scroll to the bottom
3. You should see the map with coloured project dots
4. Click a dot → it opens that project's dashboard
5. Also check **rep / rep123** → 📈 **محفظة المشاريع (Portfolio)**

Feature 2 Test as: Admin / Consultant / Owner-Rep

Project coordinates + floor areas (Project Settings)

When the Owner-Rep adds a project, map coordinates are now required (with a city quick-picker). Existing projects can set/edit coordinates and per-floor built-up areas in Project Settings. Floor areas feed the "by area" BOQ distribution.

How to test

1. Log in as **admin / admin123**
2. Open ⚙️ إعدادات المشروع **(Project Settings)**
3. Set the project **coordinates** (pick a city to auto-fill) and press save
4. Enter a **floor area (m²)** for each floor and press save

Feature 3 | Test as: Consultant

Progress Map runs on your real uploaded drawings

Previously the Progress Map drew a fake schematic. Now it shows the actual drawing you upload, and the executed zones light up over the real plan as their BOQ is approved. Drawings can be uploaded per floor AND per zone.

How to test

1. Log in as **consultant / consult123**
2. Open 🧊 **النماذج والمخططات (BIM & Drawings)** → **رفع مخطط/نموذج**
3. Upload a PDF/image, choosing a **floor** and (optional) **zone**
4. Open 🗺️ **خريطة الإنجاز (Progress Map)** → **المخططات ثنائية الأبعاد**
5. Select that floor — the real drawing appears as the background; zones brighten by BOQ %

Feature 4 | Test as: Owner-Rep / Admin

Each project isolated with its own documents

Fixed a leak where documents (files, drawings, models, reports) could appear across all projects. Now every document, drawing and record is tied to the project it was created in, and switching projects shows only that project's items. Personal items (notifications, system log, users) stay global as expected.

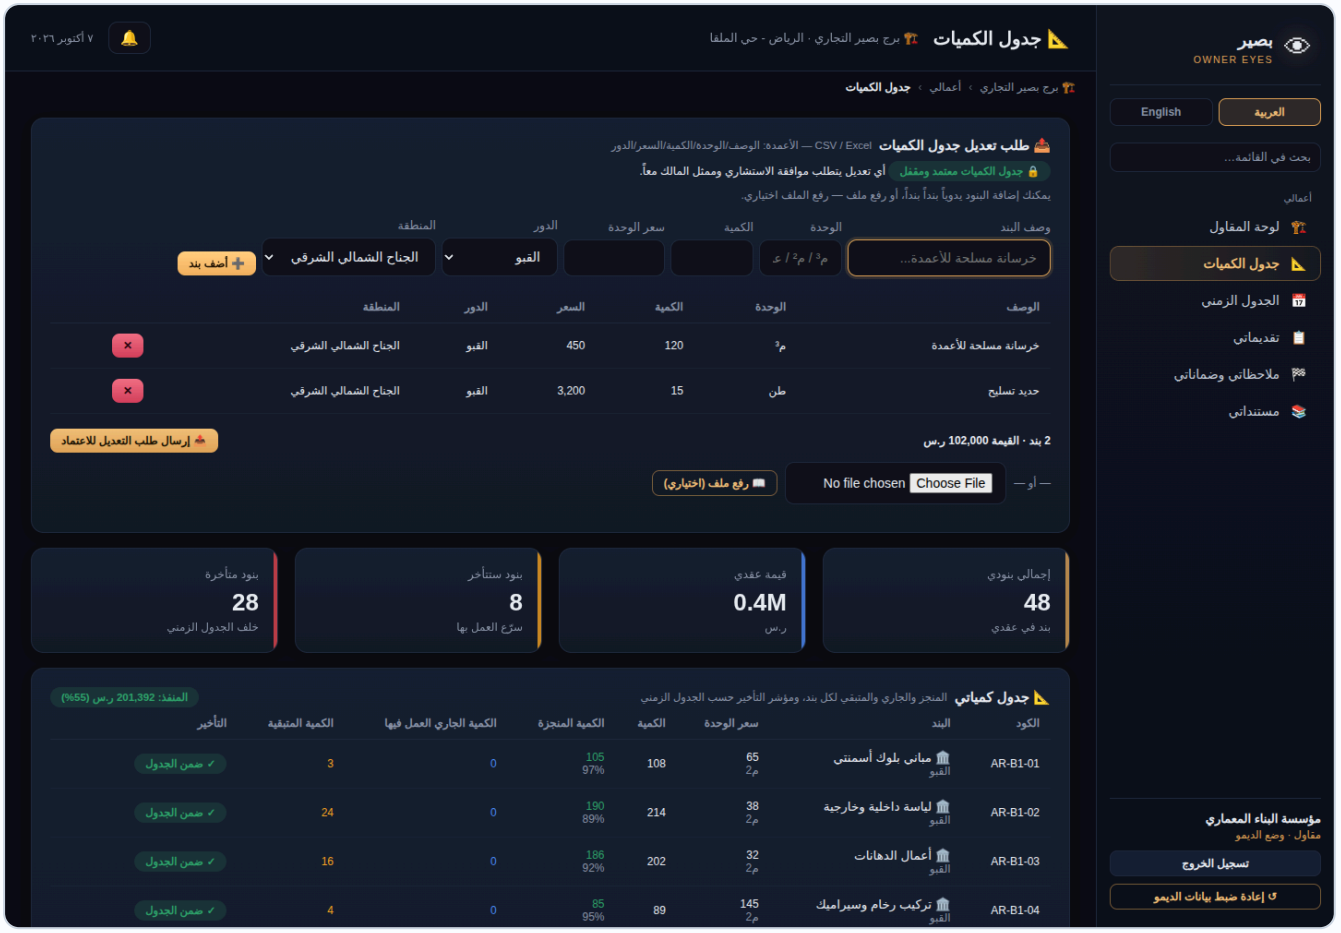

How to test

1. Log in as **rep / rep123** (sees all projects)
2. Switch between projects using the project switcher at the top
3. Open 🗄 المستندات **(Documents)** for each — each project shows only its own files
4. Upload a file while in Project B → it appears only in Project B

Feature 5 | Test as: Contractor

Contractor can add BOQ items manually (file optional)

The contractor can now build the Bill of Quantities line-by-line in a form (description, unit, qty, price, floor, zone) instead of being forced to upload a file. Uploading a file is now clearly optional. Items go through the same consultant approval + baseline-lock flow.

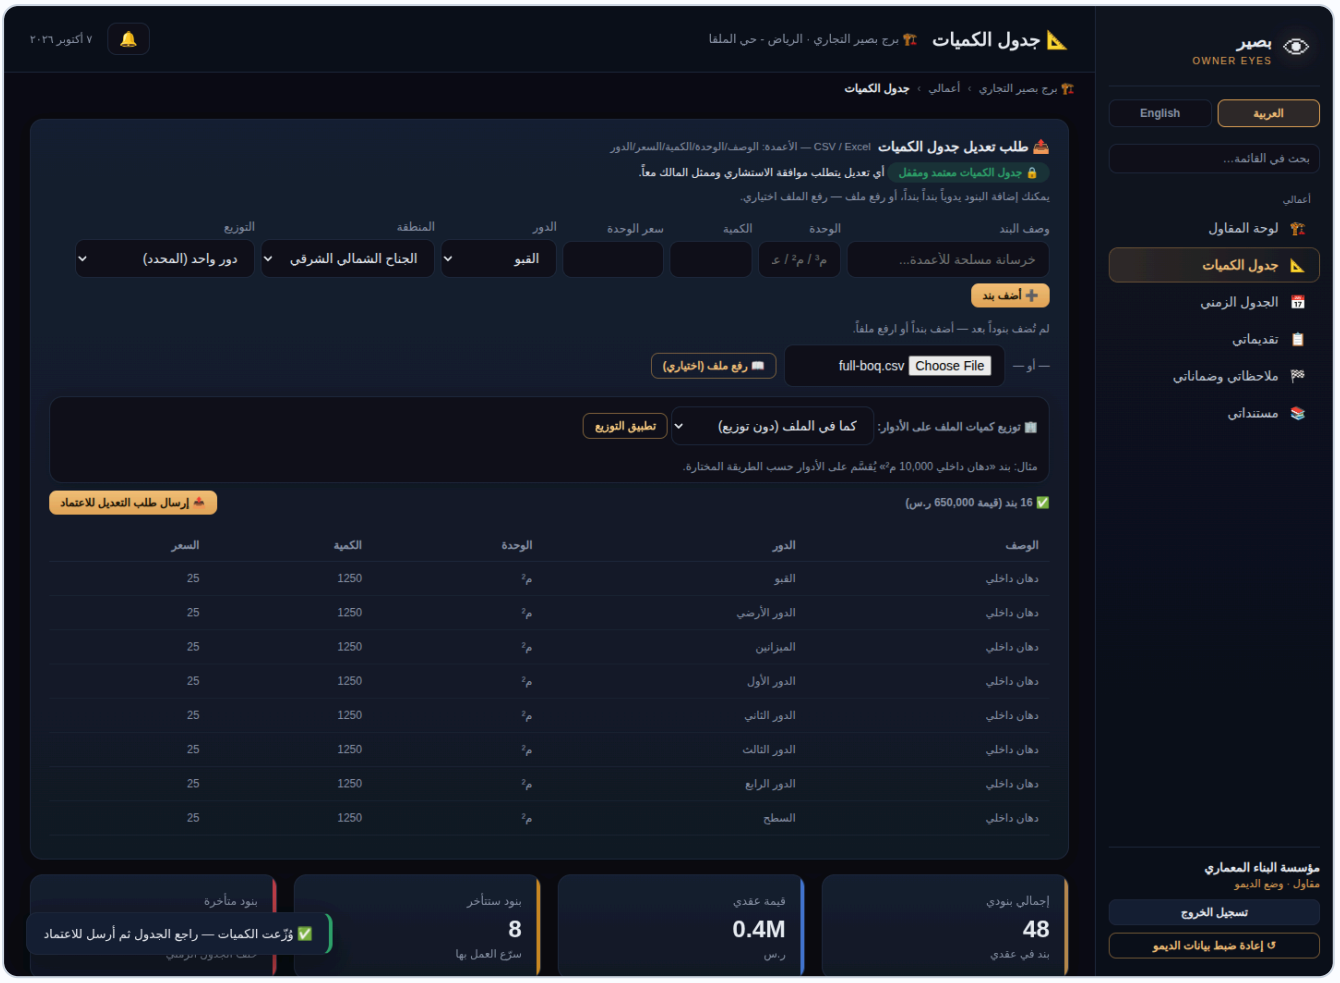

How to test

1. Log in as **cont-arch / cont123**
2. Open **📐 جدول الكميات (Bill of Quantities)**
3. Fill the item row and press **➕ أضف بند (Add item)** — repeat for more
4. Remove any row with ✕; then press **إرسال للاعتماد (Submit for approval)**
5. Note the file upload is marked **رفع ملف (اختياري) / optional**

Feature 6 | Test as: Contractor

Distribute a whole-project BOQ file across floors

When a client's BOQ file has project totals (e.g. "internal paint 10,000 m²"), you can split each item across floors in one click: equally, by floor area, by a manual percentage, or leave it whole-project. The sum is always kept exactly.

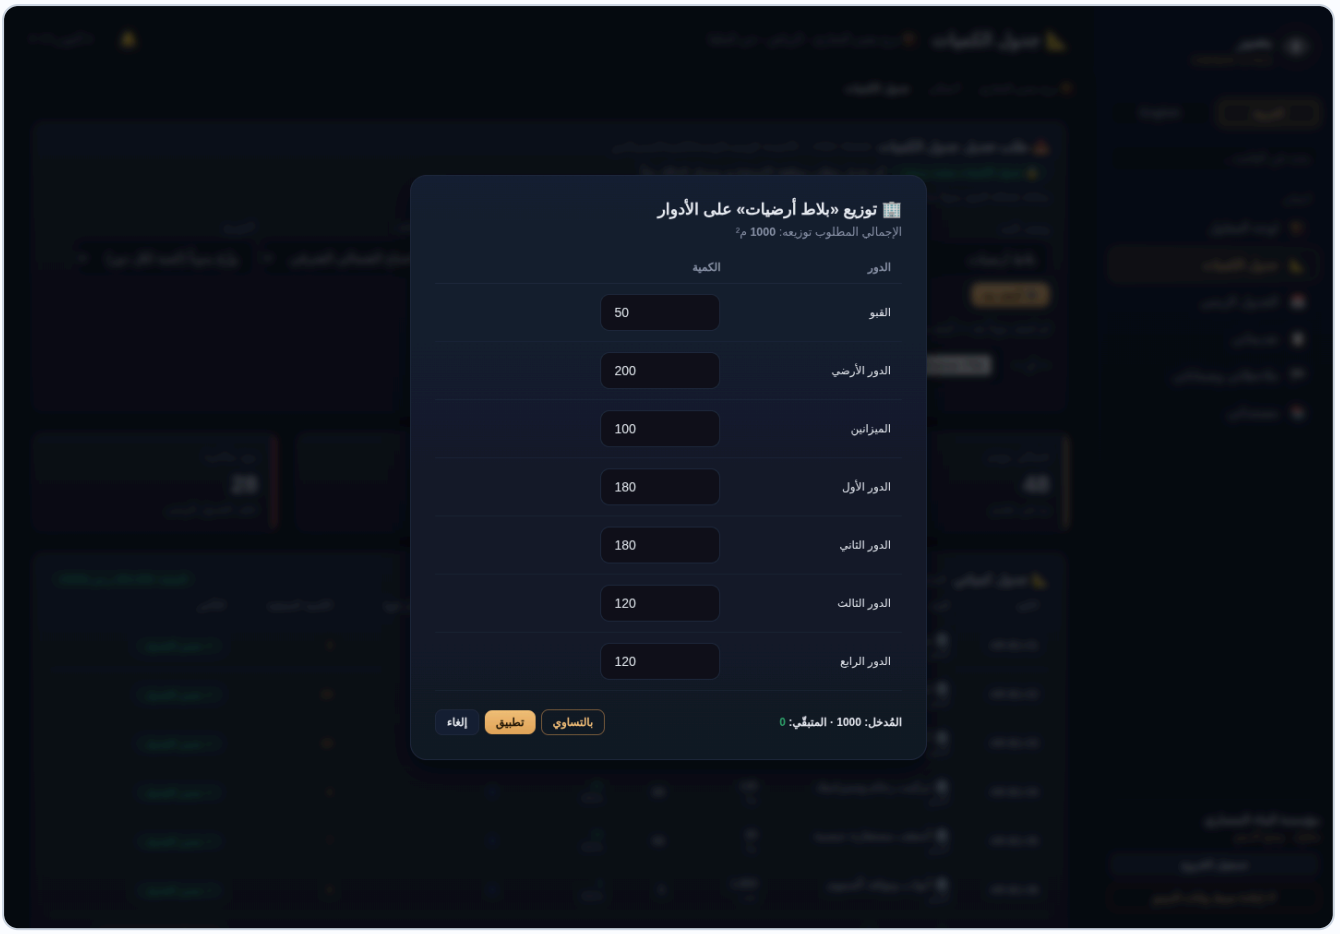

How to test

1. Log in as **cont-arch / cont123** → **جدول الكميات**
2. Choose a CSV/Excel file and press **رفع ملف (read)**
3. In "توزيع كميات الملف على الأدوار", pick **بالتساوي / حسب المساحة / يدوياً**
4. Press **تطبيق التوزيع (Apply)** — each total splits into per-floor rows
5. Review the table and submit for approval

Feature 7 | Test as: Contractor

Manual distribution with live "remaining" indicator

The fourth distribution method: type a quantity (or percentage) per floor with a live "entered / remaining" indicator. It blocks submitting until the total balances, and offers "equal" and "by area" quick-fill buttons.

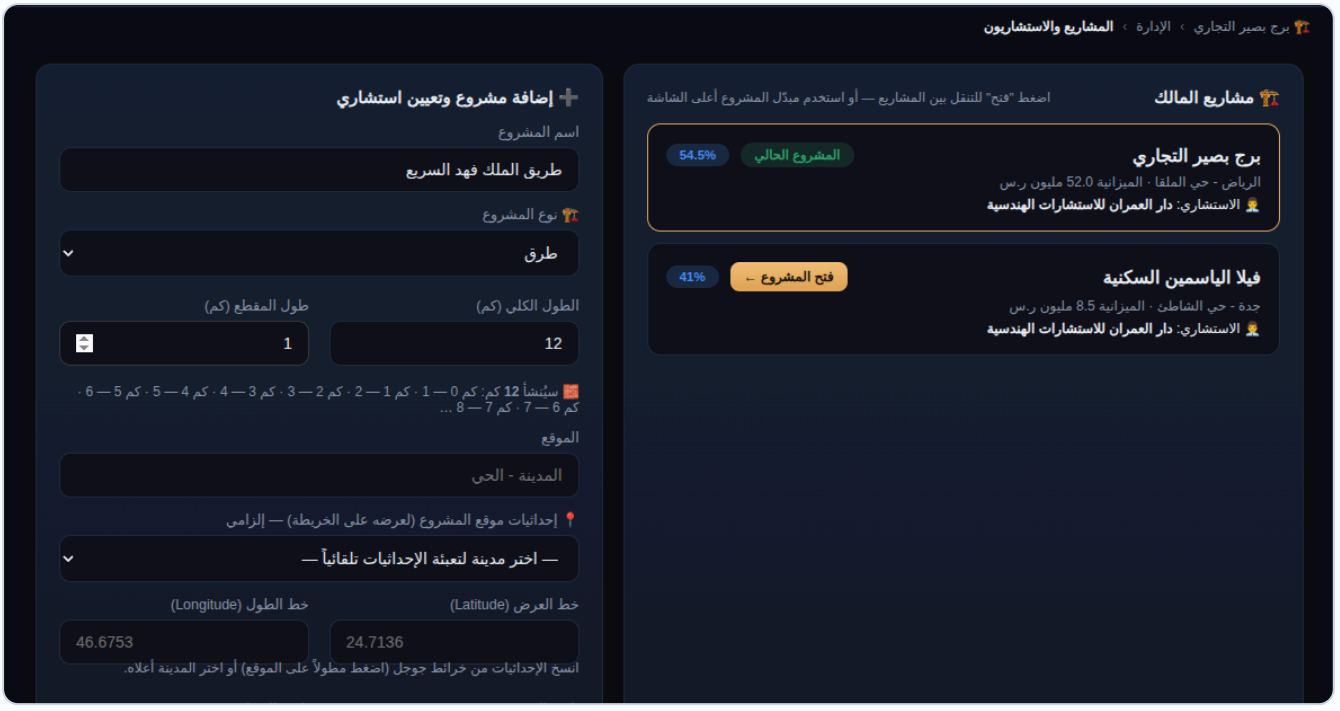

How to test

1. In the BOQ manual entry, set التوزيع (distribution) to **وزّع يدوياً** and press Add
2. Type a quantity for each floor — watch **المُدخل / المتبقّي (entered / remaining)**
3. Use **بالتساوي / حسب المساحة** to auto-fill then adjust
4. Press **تطبيق (Apply)** only works when remaining = 0

Feature 8 | Test as: Owner-Rep

Project structure by type (building / roads / infrastructure …)

When creating a project you now choose its type, and the system asks for the right structure: a building asks for basements + floors (+ mezzanine/roof); roads & infrastructure ask for total km + segment length; bridges/dams/plants ask for a count; "other" lets you type unit names. A live preview shows the generated units.

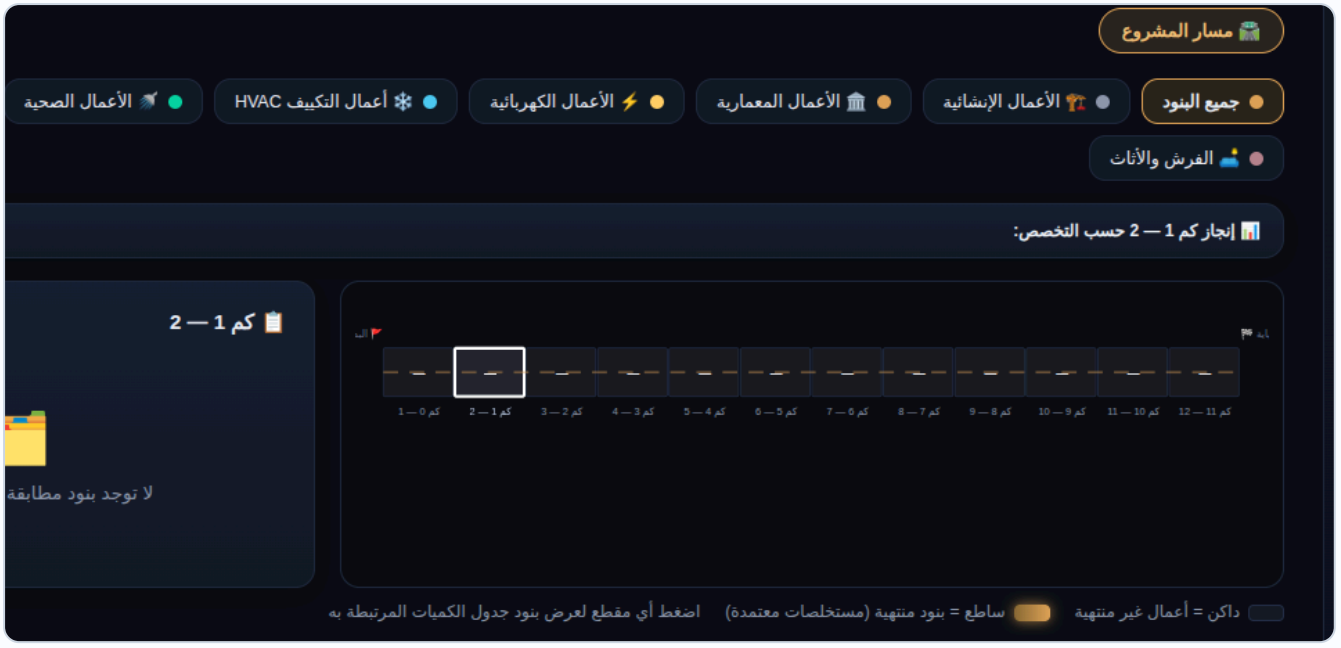

How to test

1. Log in as **rep / rep123**
2. Open **المشاريع والاستشاريون (Projects)** → add-project form
3. Pick **نوع المشروع (Project type)** — e.g. طرق (Roads)
4. Enter the structure (e.g. total 12 km, 1 km segments) — see the live preview
5. Create a few: a 30-floor tower (3 basements), a road, an "other" project

Feature 9 | Test as: Owner / Owner-Rep / Consultant

Linear route view for road / infrastructure projects

For road and infrastructure projects, the Progress Map shows a horizontal route strip divided into its km segments (instead of a building floor-plan). Each segment lights up by its BOQ progress; click a segment to see its items. Building projects keep the floor-plan + facade + BIM views.

How to test

1. After creating a Roads project (feature 8), switch to it
2. Open 🗺️ خريطة الإنجاز **(Progress Map)**
3. You see a **route strip** (🚩 Start → End 🏁) with km segments
4. Click any segment → its BOQ items show in the side panel
